21.1.6-Lab - Hashing Things Out

Ahmed Abdelhedi

part1:

43302c4500b7c4b8e574ba27a59d83267812493c029fd054c9242f3ac73100bc =!
deff9c9bbece44866796ff6cf21f2612fbb77aa1b2515a900bafb29be118080b

they are completely different

```
[analyst@secOps lab.support.files]$ nano letter_to_grandma.txt
[analyst@secOps lab.support.files]$ openssl sha256 letter_to_grandma.txt
SHA256(letter_to_grandma.txt)= 43302c4500b7c4b8e574ba27a59d83267812493c029fd054c
9242f3ac73100bc
[analyst@secOps lab.support.files]$ openssl sha512 letter_to_grandma.txt
SHA512(letter_to_grandma.txt)= 7c35db79a06aa30ae0f6de33f2322fd419560ee9af9cedeb6
e251f2f1c4e99e0bbe5d2fc32ce501468891150e3be7e288e3e568450812980c9f8288e3103a1d3
[analyst@secOps lab.support.files]$ sha256sum letter_to_grandma.txt
43302c4500b7c4b8e574ba27a59d83267812493c029fd054c9242f3ac73100bc  letter_to_gran
dma.txt
[analyst@secOps lab.support.files]$  sha512sum letter_to_grandma.txt
7c35db79a06aa30ae0f6de33f2322fd419560ee9af9cedeb6e251f2f1c4e99e0bbe5d2fc32ce5014
68891150e3be7e288e3e568450812980c9f8288e3103a1d3  letter_to_grandma.txt
[analyst@secOps lab.support.files]$
```

the hash values are identical because both commands use the same file and the same hashing algorithms.

part2:

```
[analyst@secOps lab.support.files]$ cat sample.img_SHA256.sig
c56c4724c26eb0157963c0d62b76422116be31804a39c82fd44ddf0ca5013e6a
[analyst@secOps lab.support.files]$ sha256sum sample.img
c56c4724c26eb0157963c0d62b76422116be31804a39c82fd44ddf0ca5013e6a  sample.img
[analyst@secOps lab.support.files]$
```

The SHA-256 hash calculated for sample.img is identical to the hash stored in sample.img_SHA256.sig
